

COLUMBUS INDUSTRIES SEAWATER DESALINATION UNIT

Columbus Industries in North Carolina have chosen the Rupture Pin Valve to protect their Seawater Desalination Units. The unit will produce 250,000 gallons of fresh water per day. These valves are made from Duplex Alloy 2205 for protection in the extremely corrosive operating conditions. There are two valves per unit, a 1" and a 2" Model C, both have a set pressure of 1200 psig.
